Degree in data science and informatics

Challenge Bhongwani

Attended Midlands State University

Mashonaland West Province, Zimbabwe

Summary

I am a Data Science and Informatics student at Midlands State University with a strong interest in developing machine learning models and analyzing complex datasets to extract meaningful insights. My academic training and personal projects have allowed me to build practical experience in data analysis and optimising machine learning and deep learning algorithms. I have hands-on experience using key Python libraries such as NumPy, Pandas, Scikit-learn, TensorFlow, and Matplotlib for data processing, machine learning, and data visualization. These tools enable me to clean, analyze, and model large datasets while presenting insights in a clear and interpretable way. In addition, I am proficient in version control using GitHub, which helps me manage collaborative projects and maintain well-organized codebases. I also have experience with Docker, allowing me to containerize applications and create consistent development environments. Alongside my data science studies, I am expanding my technical skill set in web application development. I have been learning modern frontend technologies such as JavaScript and the React framework, which allow me to build interactive and user-friendly web interfaces. This combination of data science and web development enables me to create full-stack, data-driven applications that can deliver insights directly to users. Currently I am further strengthening my knowledge in Generative AI through specialized online courses on Udemy and DeepLearning where I am learning about modern AI techniques, deep learning architectures, and AI-powered applications. My long-term goal is to design intelligent, data-driven solutions that address real-world challenges in areas such as business analytics, automation, and digital innovation. I am particularly interested in leveraging artificial intelligence and data science to support decision-making, improve efficiency and contribute to technological advancement in modern organizations.

Experience

DINSON IRON & STEEL COMPANY(PRIVATE)LIMITED

Chemical Laboratory Assistant

July 2025 - Present (9 months)

I am a detail-oriented and technically skilled Assistant Water Treatment Engineer with hands-on experience in operating and optimizing reverse osmosis (RO) water treatment systems for high-pressure boiler feed in electric power generation.

My core responsibilities include pre-treating raw water, managing RO plant operations, and conducting in-depth water chemistry analysis — including pH, conductivity, phosphate levels, and TDS — to ensure that only high-purity water enters the boiler system. I also perform regular sampling and testing of feed water, boiler water, saturated steam, and superheated steam to maintain boiler efficiency and protect key assets.

Education

Midlands State University

Bachelor in Data science and informatics , Computer Systems Networking and Telecommunications · (July 2024 - October 2027)

Midlands State University

· (2024)
